static mixers for plastic processing

## for Extrusion

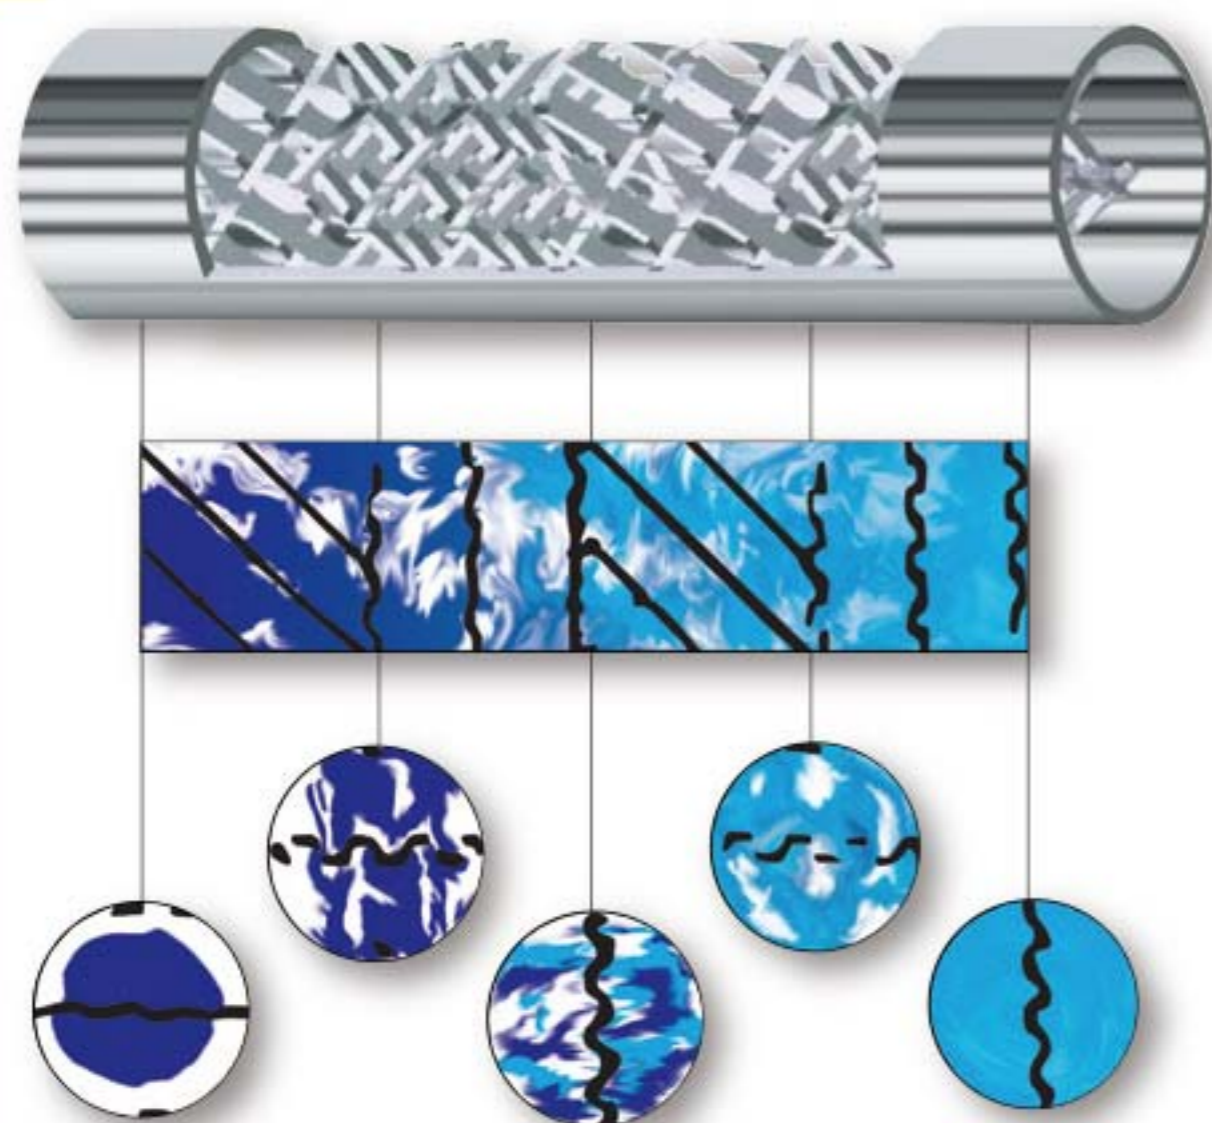

### Plus:

- Closer tolerances to more uniform melt flow in the die.
- Less thickness variation.
- Improved mechanical and surface quality of the final product.
- It has no moving parts, no maintenance.
- High mechanical strength.

### Melt blenders for extrusion offer the following advantages:

- High mixing efficiency even with variable processing conditions.
- Excellent temperature uniformity.
- Even colour distribution (reduced colorant costs)
- Uniform viscosity, even when processing high percentage of scraps.

For mixing and dispersing of viscous liquids, for conditioning temperature-sensitive fluids, and as a tubular reactor with short residence time distribution.
